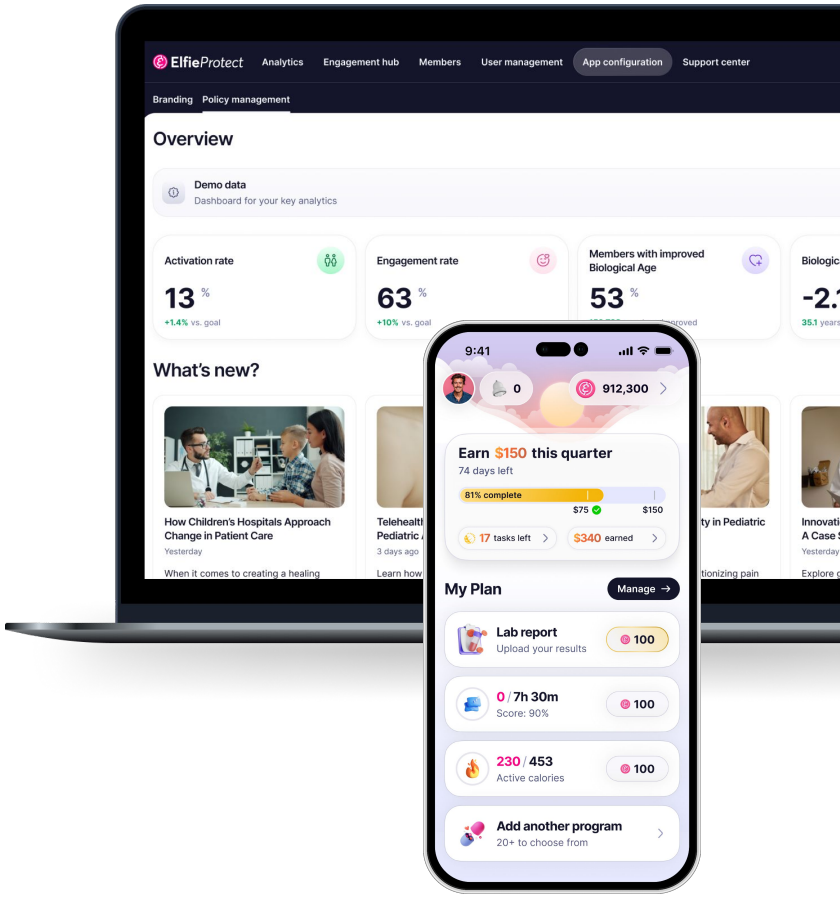
Challenges for Qwen AI Hackaton



APRIL 2026

SECTION 1

The Company

OUR MISSION

Drive medical impact globally with a super-health platform free for doctors and patients

A few numbers

A single patient-centric platform can succeed across diseases and demographics

30+
countries

1.5m+
users

4.9*
stores ratings

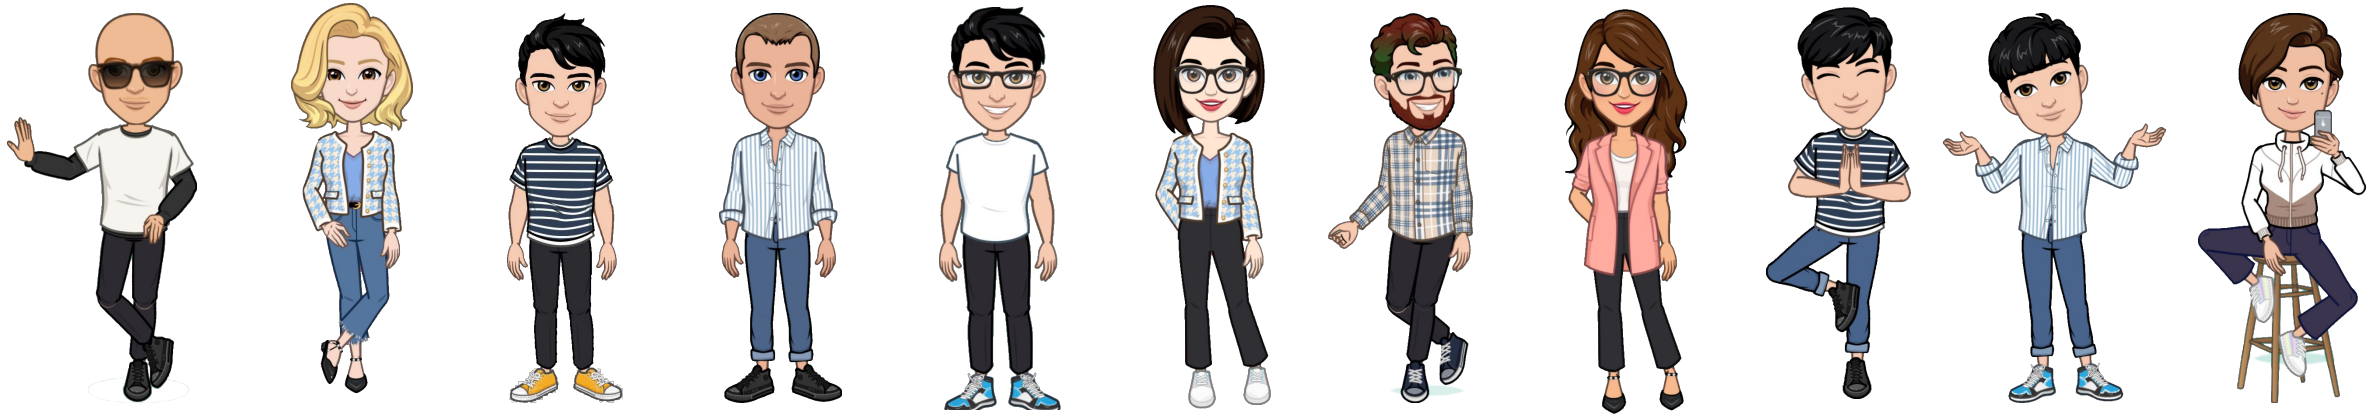
$100m
US company

+50%
annual growth

50+
engineers

The team

Global 90+ team with all product and technology team in HCMC



sanofi Pfizer NOVARTIS MSD

SAMSUNG Microsoft slack YouTube Grab L'ORÉAL

Elfie *App*

The only **FREE** medical-grade app supporting all their health goals and their family.

Key features

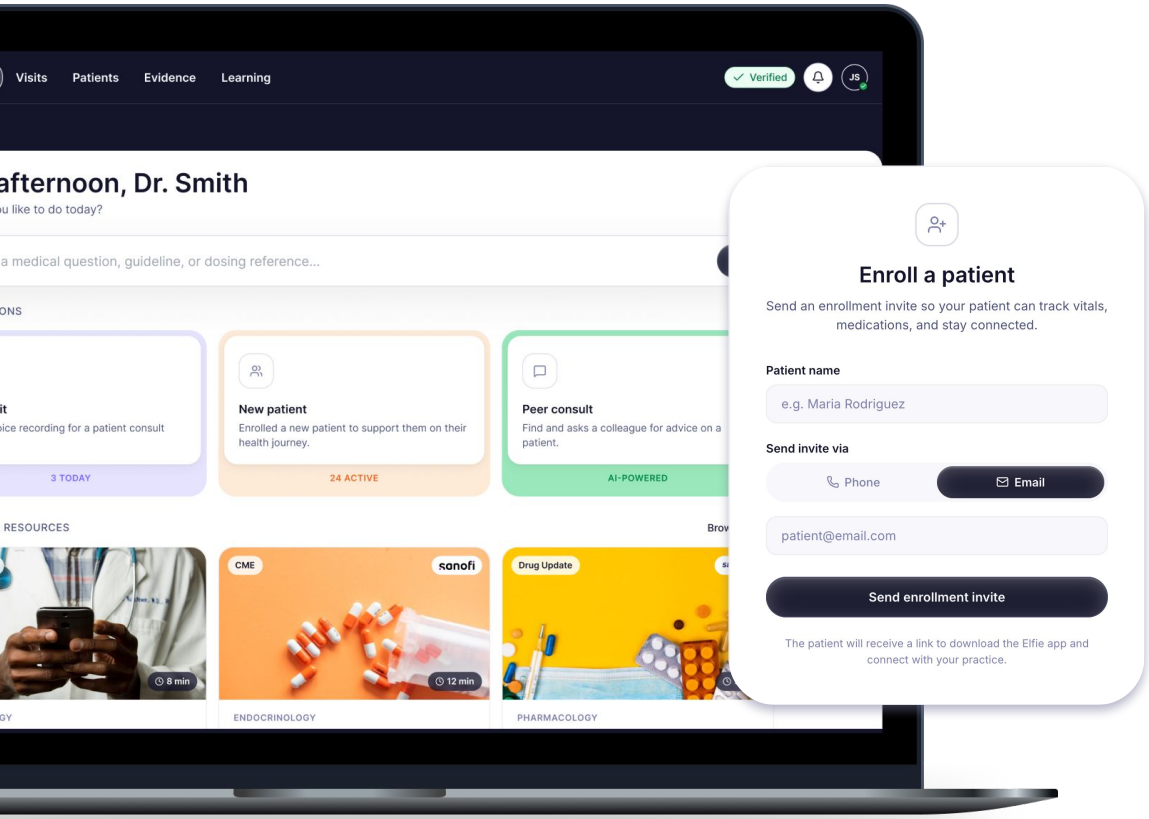
- 400+ diseases
- 4m+ medications
- 10+ premium wellness programs
- Gamification and rewards
- Children & caregiver mode
- Voice and Video AI for Skin Health, Nutrition, Mental Health
- Health report for doctor visits

Value for the Ecosystem:

- Increase disease prevention and awareness,
- Improve treatment initiation & adherence,
- Improve medical outcomes
- Continuous global Real-World Evidence

Elfie *Care*

Driving doctor's clinical confidence, visit efficiency and patient engagement



Value for doctors:

The only free CDS-adjacent <u>compliant</u> platform that provide AI clinical guidance and patient engagement in one place.

- Ai-clinical support (e.g. ChatGPT for doctor);
- Ai-enabled visit summary (save time);
- Patient enrollment and monitoring (drive impact and revisit);
- Learning and e-consent: access pharma-sponsored resources;
- Compliant with local regulation.

Value for the ecosystem:

- Reduce treatment leakage and improve medical outcome.
- Increase program reach cost-efficiently.

SECTION 2

The Challenges

The prizes

We are serious about getting the best products and people

₫1billion
commercial contract*

/

3+
job contract

*Up to VND1 billion depending on the scope of the commercial contract

Challenge #1 • The Medical Scribe

The Problem

Doctors and clinical staff spend **10–15 hours per week** writing consultation reports.

Automating consultation documentation can significantly improve both clinical workflows and patient outcomes.

The Solution

Build an AI system that can:

1. ingest and transcribe a raw consultation audio recording
2. extract structured clinical information (symptoms, findings, diagnosis, treatment)
3. generate a structured clinical report for doctors

The Evaluation

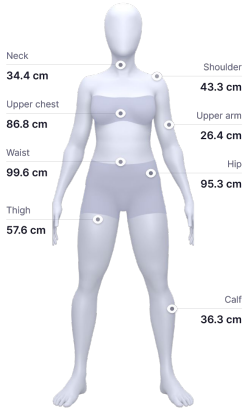
We will use consultation audio recordings between a patient and a doctor in EN/FR/AR/VN to score your product on 5 dimensions:

- Clinical correctness
- Multilingual handling
- Completeness
- Actionability
- UX clarity

Challenge #2 • The Body Scan

The Problem

Patients do not have access to simple and free way to measure their body fat ratio and visualize their body shape improvement.



The Solution

Build an AI system that can:

1. ingest front and profile body images
2. estimate body measurements
3. estimate body fat ratio

The Evaluation

We will use front and profile body images of an adult to score your product on 2 dimensions:

- Measurement accuracy
- Body Fat Ratio accuracy

Challenge #3 • The Labs Analyzer

The Problem

Patients receive lab results that are impossible to interpret without medical support.

Automating consultation documentation can significantly improve both clinical workflows and patient outcomes.

The Solution

Build an AI system that can:

1. ingest lab reports from PDFs
2. extract and standardize lab values (tests, units, reference ranges)
3. identify abnormal results
4. generate clear, patient-friendly explanations and next steps

The Evaluation

We will use long-format PDF of a labs result in EN/FR/AR/VN to score your product on 5 dimensions:

- Clinical correctness
- Severity accuracy
- Completeness
- Actionability
- UX clarity
